**Premier Laboratory, LLC
61 Louisa Viens Drive
Dayville, CT 06241
800-334-0103**

An annual test of your drinking water is recommended and should include a bacterial and chemical analysis. If your water has a low pH, testing for lead and copper is also recommended. Connecticut Department of Public Health also recommends all wells be tested for arsenic and uranium when first drilled, at the time of sale and every five years.
