

### COVID-19

# ISOLATION AND QUARANTINE

More Questions? Check out: www.vdh.virginia.gov/coronavirus/

#### What's the Difference?

### **Isolation**

The separation of people with COVID-19 from others.

People in isolation need to stay home and separate themselves from others in the home as much as possible.

#### **Quarantine**

The separation of people who were in close contact<sup>1</sup> with a person with COVID-19 from others.

People in quarantine should stay home as much as possible, limit their contact with other people, and monitor their health closely in case they become ill.

### When is it safe to resume normal activities?

## I was sick with COVID-19

It is safe to end home isolation when: At least **10 days** have passed since your symptoms first appeared

#### **AND**

You haven't had a fever for at least **24 hours** (without the use of medication) **and** other signs of illness are improving

## I was diagnosed with COVID-19, but never became sick

It is safe to end home isolation when:
At least **10 days** have passed since your positive diagnostic test

- 1. Close contact means being within 6 feet of a person with COVID-19 for at least 15 minutes or having exposure to the person's respiratory secretions (e.g., coughed or sneezed on; shared a drinking glass or utensils; kissing) while they were contagious. A person with COVID-19 is considered to be contagious starting from 2 days before they became sick (or 2 days before they tested positive if they never had symptoms) until they meet the criteria to discontinue isolation.
- 2. Separate completely means no contact, no time together in the same room, and no sharing of any spaces (including a bedroom and bathroom).

## The person I was in contact with lives outside my home

It is safe to end quarantine when: At least **14 days** have passed since your last contact with the person with COVID-19

#### AND

You remain healthy

## The person I was in contact with lives with me

If you are able to separate completely<sup>2</sup> from the person with COVID-19, it is safe to end quarantine when:

At least **14 days** have passed since your last contact with the person with COVID-19 **AND** you remain healthy

If you are unable to separate completely<sup>2</sup>, it is safe to end quarantine when at least **14 days** have passed since the person with COVID-19 was allowed to end home isolation **AND** you remain healthy.
