## **Mosquitoes in Ledge Light Health District Test Positive for Eastern Equine Encephalitis and West Nile Virus**

Ledge Light Health District announced today that mosquitoes collected in Stonington on September 11 have tested positive for Eastern Equine Encephalitis (EEE) and West Nile Virus (WNV), and that mosquitoes collected in Ledyard on September 13 have tested positive for West Nile Virus. In all cases, the positive mosquito was *culiseta melanura*, which is known to primarily bite birds but has been known to bite mammals. Positive EE and WNV mosquitoes are normally expected during the summer months, and their presence serves as a reminder for community members to take standard precautions to avoid being bitten by mosquitoes.

Previously this summer, mosquitoes from North Stonington (8/21), Waterford (8/23) and Lyme (9/6) tested positive for WNV.

### **Precautions to avoid mosquito bites:**

- Minimize time outdoors at dusk and dawn.
- Be sure door and window screens are tight fitting and in good repair.
- While outdoors, wear shoes, socks, long pants, and long-sleeved shirts. Clothing material should be tightly woven.
- Use mosquito netting when sleeping outdoors.
- Consider using mosquito repellent when it is necessary to be outdoors and always use them according to label instructions. The most effective repellents contain DEET or Picaridin. Oil of lemon eucalyptus is also effective for brief periods of exposure.
- When using DEET, use the lowest concentration effective for the time spent outdoors (for example, 6% lasts approximately 2 hours and 20% for 4 hours) and wash treated skin when returning indoors. Do not apply under clothing, to wounds or irritated skin, the hands of children, or to infants less than 2 months.

### **Measures to reduce mosquitoes around the home:**

- Dispose of water-holding containers, such as ceramic pots, used tires, and tire swings.
- Drill holes in the bottom of containers such as those used for recycling.
- Clean clogged roof gutters.
- Turn over objects that may trap water when not in use such as wading pools and wheelbarrows.
- Change water in bird baths on a weekly basis.
- Clean and chlorinate swimming pools, and cover pools when not in use.
- Use landscaping to eliminate areas where water can collect on your property.
